For Use by Licensed Professionals Only

*Read all instructions and refer to video
before starting treatment.

PRODUCTS:

T180 PROFESSIONAL™
Keratin Smoothing
Treatment

T180 PROFESSIONAL™
Protective Serum

1. EVALUATE

Evaluate the client's hair, e.g., normal, damaged, dry, or brittle.

2. DRY HAIR

Apply on dry hair (washed or unwashed). It is not necessary to wash your hair unless it is; a) extremely dirty, b) has gel residue, c) was washed recently with anti-dandruff shampoo.

3. CLEANSE

If hair has an excessive amount of chemical residue or has been chemically relaxed (i.e., Japanese, or permanent straightening), wash client's hair (repeat if necessary) with a deep cleansing shampoo before applying the T180 PROFESSIONAL™ Keratin Smoothing Treatment. Rinse and dry thoroughly before applying the treatments.

4. APPLY PROTECTIVE SERUM

Apply a few drops of T180 PROFESSIONAL™ Protective Serum only on the ends or the sensitized parts of dry hair.

5. APPLICATION

Divide the head into 4 parts, e.g., same as colouring. Begin application of T180 PROFESSIONAL™ Keratin Smoothing Treatment at the nape in 1-2 inch sections working up to the top of the head - apply 1/2" to 3/4" from the scalp to the tips, including the most resistant parts without touching the scalp.

6. SPREAD FOAM

Press the foam pump 2 – 3 times (top, middle, and ends). Spread the foam with your gloved hands, ensuring the distribution of the product, and then comb gently without pulling or stretching the hair.

7. HEAT SOURCE

Place a plastic cap on your client's hair and leave under the heat source during the time shown in the Smoothing Parameters Heat Table. Remove from heat source. Refer to "Extra Time Without Heat" in the Smoothing Parameters Heat Table for the exact amount of time based on hair type and texture.

T180 PROFESSIONAL™

KERATIN TREATMENT SYSTEM

KERATIN SMOOTHING TREATMENT

HEAT TIMETABLE FOR T180 PROFESSIONAL™ SMOOTHING, VOLUME REDUCTION, AND SPLIT ENDS TREATMENTS

Reminder: Add 20 Minutes if Used Without Heat Source

| HAIR TYPE | MINIMUM UNDER HEAT SOURCE (MINUTES) | MAXIMUM UNDER HEAT SOURCE (MINUTES) |
|----------------------------------|-------------------------------------|-------------------------------------|
| Fine, Fragile, and/or Damaged | 10 | 15 |
| Highlighted and/or Color Treated | 10 | 15 |
| Normal and/or Resistant | 15 | 30 |
| Coarse and/or Very Resistant | 20 | 40 |

PRODUCT REMOVAL PARAMETERS TABLE

| HAIR TYPE AND TEXTURE | |
|---|------------------------------|
| Fine, Fragile, Damaged, Highlighted and/or Color-Treated Hair | 80 to 90% (50 Seconds) |
| Natural (untreated, unprocessed) and/or Resistant. | 40 to 50% (30 Seconds) |
| Coarse and/or Very Resistant | 20 to 30% (15-20 Seconds) |

8. RINSE

Remove the product with water only, using the table on the left, and towel dry.

9. BLOW DRY

Blow-dry hair with a round brush. The use of an ionic blow dryer promotes better results during treatment.

10. APPLY PROTECTIVE SERUM

Use a few pumps of T180 PROFESSIONAL™ Protective Serum on the hands and apply throughout the hair.

11. FLAT IRON

Starting at the nape (same as treatment application), apply the flat iron from the hair root to the tips. A flat iron of titanium or ceramic with at least 1-1/4 inch width is recommended.
